

James C. Paulson obtained his PhD (Biochemistry) in 1974 from the University of Illinois at Champaign-Urbana, and did post-doctoral work at Duke University Medical Centre, in Durham, North Carolina from 1974-78. From 1978 – 1990 he rose from Assistant Professor to full Professor and vice-chair in the Department of Biological Chemistry at the UCLA School of Medicine where he developed an interest in analysis of receptor specificity of influenza viruses from different host species. From 1990-1999 he served as Vice President and Member Board of Directors of Cytel Corporation, La Jolla, CA. From 1999-present he has been Professor in the Departments of Chemical Physiology and Molecular Biology at the Scripps Research Institute, in La Jolla, California. Dr. Paulson served as the President for the Society for Glycobiology from 2002-2003, and currently served on National Academy of Sciences Glycoscience Committee. He is currently Director of the Consortium for Functional Glycomics (<http://www.functionalglycomics.org>) an international consortium of over 500 investigators. His current research interests include the roles of glycan binding proteins in the modulation of immune cell signaling, and the receptor specificity of mammalian and animal influenza viruses.
