

Postdoctoral position investigating the role of glycans in cardiac development and disease

A post-doctoral position is open in the Bloomekatz laboratory to participate in our recently funded investigations into the role of glycans and the glycocalyx in cardiac development, morphogenesis, and disease. We utilize an innovative combination of genetic, live-imaging, and system-biology approaches in zebrafish. For details on our research please see our website <https://thebloomekatzlaboratory.org>.

Interested in joining our dynamic group at the University of Mississippi in Oxford, MS. Please submit a cover letter and resume to Dr. Bloomekatz at josh@olemiss.edu. Anticipated start date Summer or Fall 2023. More information about our research can be found at <https://thebloomekatzlaboratory.org>

The University of Mississippi is an EOE/AA/Minorities/Females/ Vet/Disability/Sexual Orientation/Gender Identity/Title VI/Title VII/Title IX/ADA/ADEA employer. Unrepresented minorities are encouraged to apply.
